

# Scopex Money - Detailed Manual Test Plan

QA: Yogesh Shingne

-----

## 1. Introduction

### Objective

The objective of this test plan is to define the approach and strategy for manually testing the following functionalities of Scopex Money:

1.User Registration

2.Adding a Recipient

3.Login

This document outlines the test scenarios, test data requirements, expected outcomes, test environment, and assumptions to ensure a comprehensive validation of the application.

## **2. Test Approach**

### **Key Test Scenarios**

#### **User Registration**

1. Verify that a user can successfully register with valid credentials.
2. Validate error messages for invalid inputs (e.g., missing fields, incorrect email format, weak password, etc.).
3. Check if the user receives a confirmation email or OTP (if applicable).
4. Confirm redirection to the dashboard upon successful registration.

#### **Adding a Recipient**

1. Verify that a user can add a recipient with valid details.
2. Validate error messages for missing or incorrect details.
3. Ensure that the newly added recipient appears in the recipient list.

4. Check if duplicate recipients can be added and validate restrictions (if any).

## **Logout**

1. Verify that clicking the logout button successfully logs the user out.

2. Ensure that the session is terminated and the user is redirected to the login screen.

3. Confirm that the user cannot access the dashboard after logging out without re-authenticating.

## **Test Data Requirements**

1. Valid and invalid user registration data (email, password, name, etc.).

2. Recipient details including valid and invalid inputs.

3. Existing user credentials for login and logout tests.

## **Expected Outcomes**

1. Registration should be successful, and the user should be redirected to the dashboard.

2.The recipient should be added successfully and displayed in the recipient list.

3.Logout should function correctly and return the user to the login screen.

## **Test Environment**

1.Devices: Desktop, Mobile

2.Browsers: Chrome, Firefox, Edge, Safari

3.Operating Systems: Windows 10/11, macOS, Android, iOS

## **Assumptions, Risks & Constraints**

1.The application is stable and ready for testing.

2.Network connectivity is required for registration and adding recipients.

3.No major UI changes will occur during the testing period.

4.Users should have access to a valid email or phone number for verification purposes.

### 3. Acceptance Criteria

1.**User Registration:** Registration is successful, and the user is redirected to the dashboard.

2.**Adding a Recipient:** The recipient should be added successfully and displayed in the recipient list.

3.**Logout:** The user should be logged out, and the session should be terminated, redirecting the user to the login screen.
